

An easy way to remember how to add or subtract integers is to use a number line. Find the first number in the problem then follow the appropriate rule: *When we **add a positive** we move to the **right** on the number line. When we **subtract a positive** we move to the **left** on the number line. When we **add a negative** we move to the **left** on the number line. When we **subtract a negative** we move to the **right** on the number line.*

$$+ (\quad) = \quad \quad \quad + (\quad) = \underline{\quad\quad\quad} \quad \quad \quad + (\quad) = \underline{\quad\quad\quad}$$

$$+ (\quad) = \underline{\quad\quad\quad} \quad \quad \quad + (\quad) = \underline{\quad\quad\quad} \quad \quad \quad + (\quad) = \underline{\quad\quad\quad}$$

$$+ (\quad) = \underline{\quad\quad\quad} \quad \quad \quad + (\quad) = \underline{\quad\quad\quad} \quad \quad \quad + (\quad) = \underline{\quad\quad\quad}$$

$$+ (\quad) = \underline{\quad\quad\quad} \quad \quad \quad + \quad = \underline{\quad\quad\quad} \quad \quad \quad - (\quad) = \underline{\quad\quad\quad}$$

$$+ \quad = \underline{\quad\quad\quad} \quad \quad \quad + \quad = \underline{\quad\quad\quad} \quad \quad \quad + \quad = \underline{\quad\quad\quad}$$

$$+ \quad = \underline{\quad\quad\quad} \quad \quad \quad + (\quad) = \underline{\quad\quad\quad} \quad \quad \quad - \quad = \underline{\quad\quad\quad}$$
